

Smell gas?

Don't wait.
Go outside and call
608-252-1111.

From household heating to cooking food to drying clothes, natural gas is an invisible helper throughout your home.

Natural gas is odorless, but we add a distinctive odor for your safety. Some say it smells like rotten eggs. This odor will help you detect natural gas leaks that may occur in your home, business or neighborhood.

If you smell natural gas:

- Don't touch anything electrical.
- Leave the building.
- Call MGE immediately at 608-252-1111 from outside and away from the odor.

Winter gas safety reminders

For your furnace to operate properly, keep snow cleared from your vents. Also, please remember to clear ice and snow around electric and gas meters carefully by hand.
